# Introduction

## Key novel features:

1. Group-stratification for multi-group experiments
2. Meta-analysis-based biomarker identification

## Benchmarks:

1. Validated with 3 case studies
2. Compared with 17 WMGS tools

snakemake-based open-source software with tutorials

- OUTPOST is a comprehensive analysis software for whole-metagenome shotgun sequencing, managed by Snakemake, encompasses 14 modules and boasts over 50 functions, distinguishes itself for its comprehensiveness when compared with 17 existing tools.
- OUTPOST's unique capability for processing group stratification makes it particularly suitable for multi-group experimental designs and tailored for computational perturbation studies.
- OUTPOST introduces innovative methods for meta-analysis-based biomarker identification.

# Case 1: The evaluation of OUTPOST using the published cat microbiome work

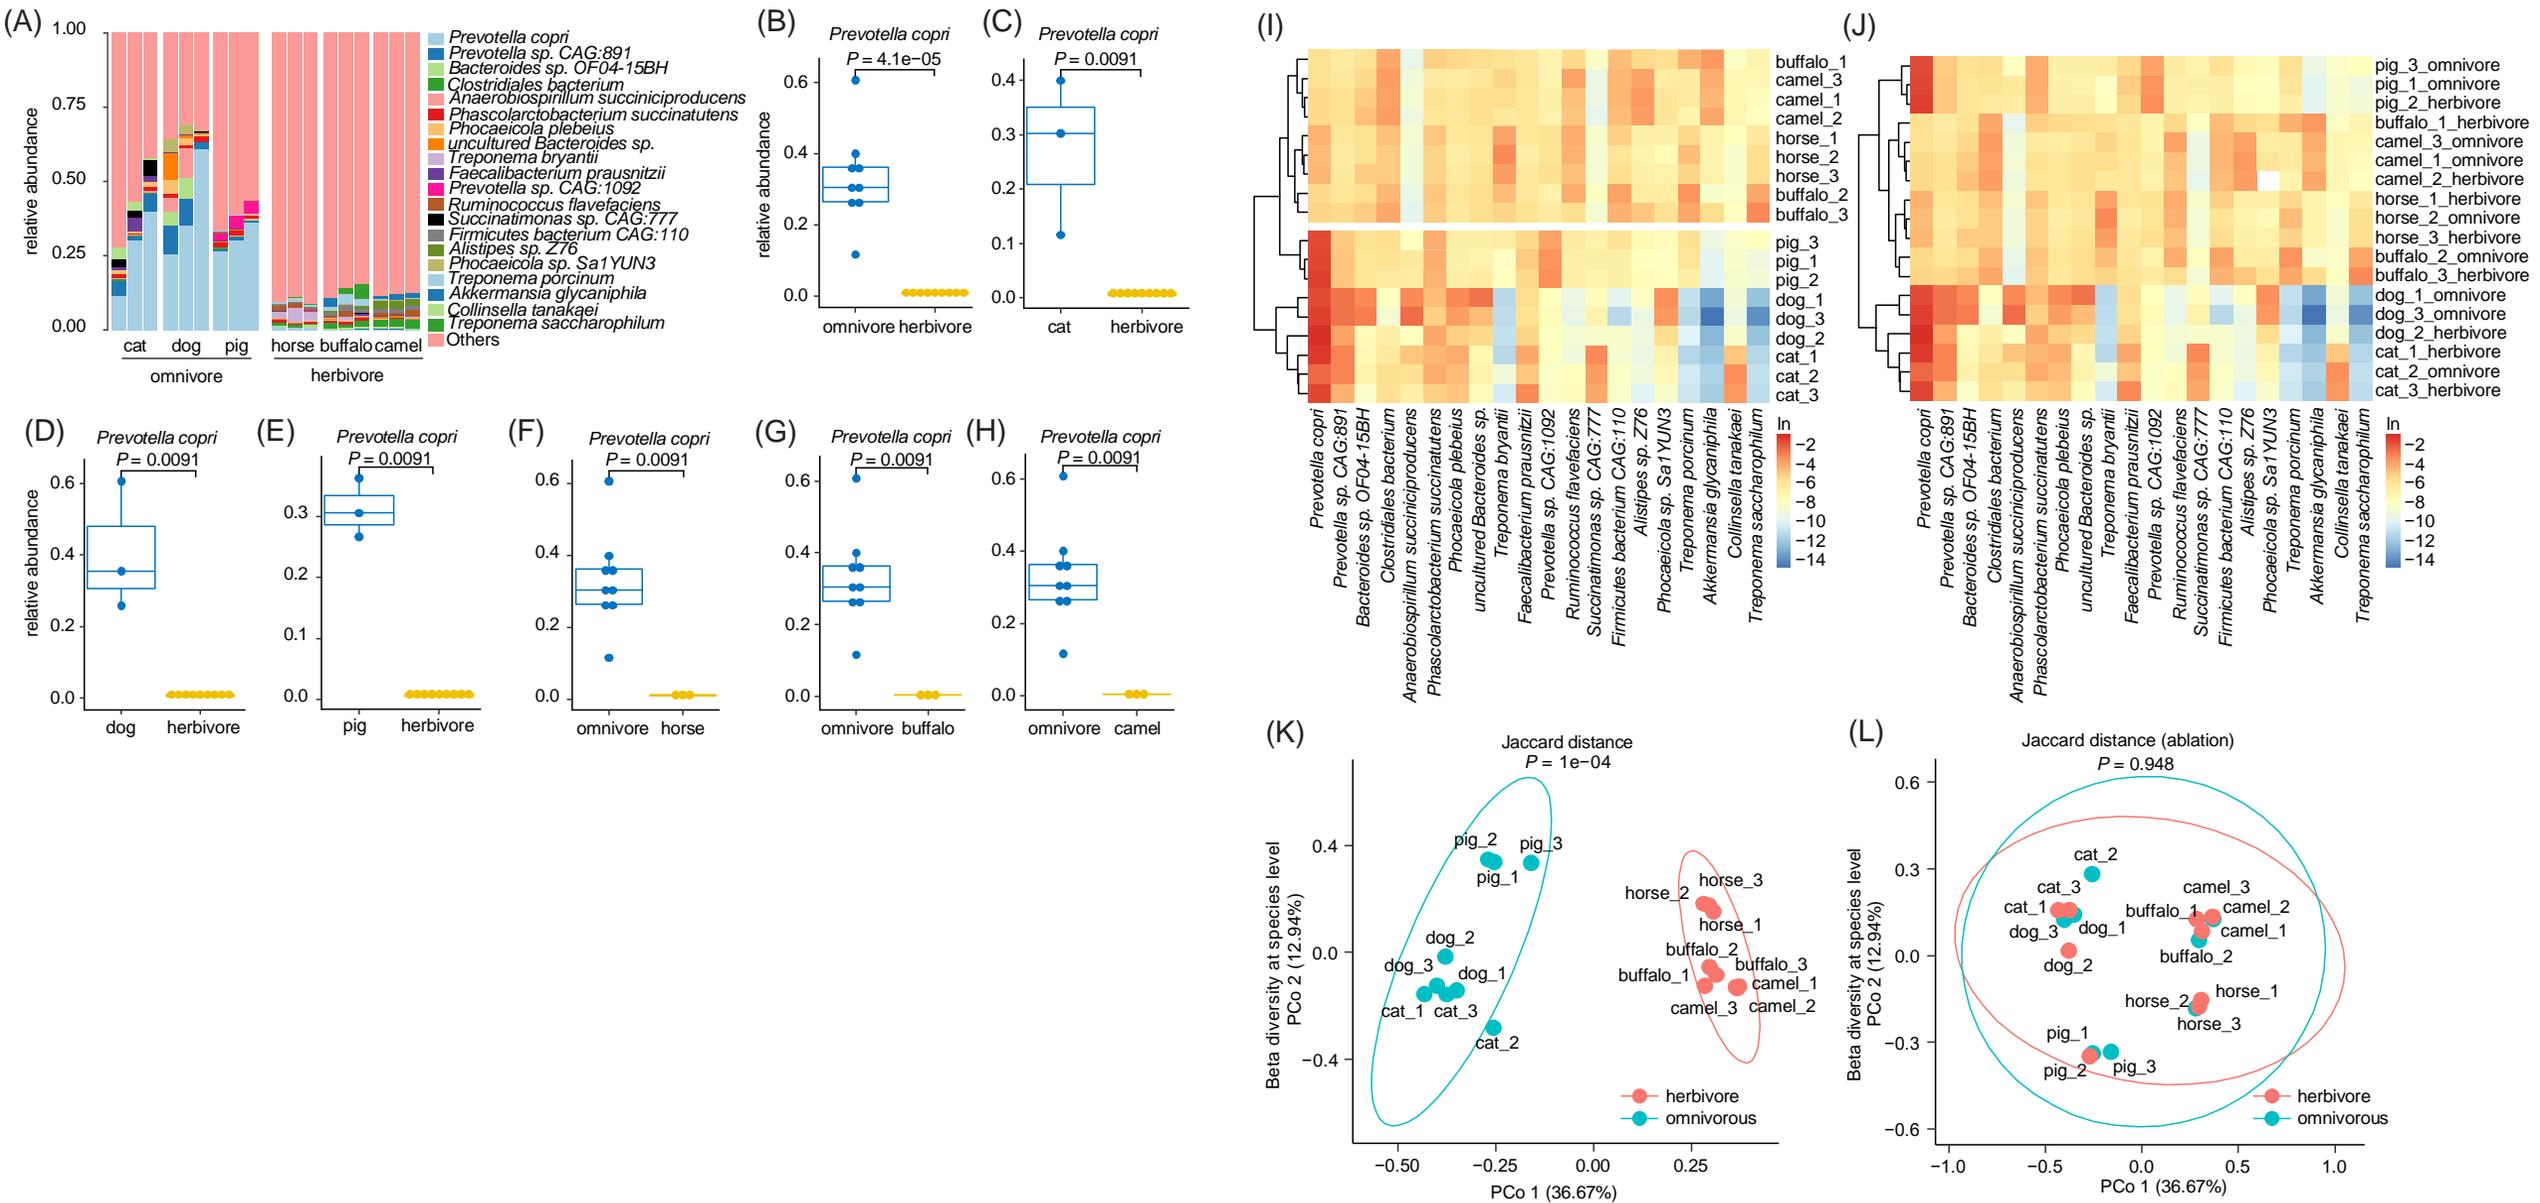

# Case 2: The further exploitation of OUTPOST with the mammalian microbiome

# Case 3: The test of OUTPOST in therapeutic microbiome

# Summary

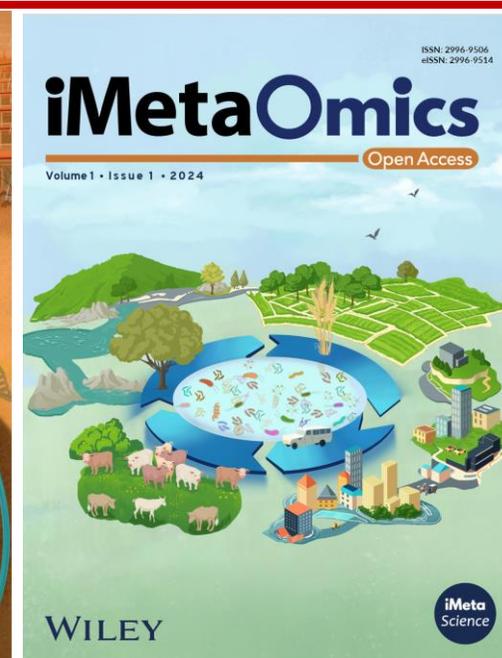

- ❑ Comprehensive Analytical Functions and Multi-Group Support: OUTPOST offers 14 modules, integrating over 50 functions and 40+ third-party tools, making it particularly effective for handling multi-group experimental designs and complex metagenomic analyses.
- ❑ Innovative Computational Perturbation Experiments and Biomarker Identification: OUTPOST introduces computational perturbation experiments and meta-analysis-based biomarker identification, enhancing the robustness and practical value of the analysis.
- ❑ Operational Robustness and User-Friendliness: With a Snakemake-based framework, OUTPOST provides a reliable and flexible analysis environment, catering to users ranging from beginners to advanced researchers.

**iMeta:** Integrated meta-omics to change the understanding of the biology and environment

**WILEY**

“***iMeta***” is a Wiley partner journal launched by iMeta Science Society in 2022, receiving its first impact factor (IF) of **23.7** in 2024, ranking 2/165 in the microbiology field. It aims to publish innovative and high-quality papers with broad and diverse audiences. Its scope is similar to *Nature Biotechnology*, *Nature Microbiology*, and *Cell Host & Microbe*. Its unique features include video abstract, bilingual publication, and social media dissemination, with more than 500,000 followers. It has published 200+ papers and been cited for 4000+ times, and has been indexed by [ESCI/WOS/JCR](#), [PubMed](#), [Google Scholar](#), and [Scopus](#).

“***iMetaOmics***” is a sister journal of “***iMeta***” launched in 2024, with a target IF>10, and its scope is similar to *Microbiome*, *ISME J*, *Nucleic Acids Research*, *Briefings in Bioinformatics*, *Bioinformatics*, etc. All contributes are welcome!
